

ABC's for Basic Pool Treatment

Based upon 10,000 gallons of water - adjust numbers for larger pools

Week 1 -

- 1) Do a phosphate test along with a combined chlorine test
- 2) Purge pool with CV 700 (residential pools) CV 600 (commercial pools)
1 quart per 10,000 gallons - 1x ONLY
- 3) Brush pool aggressively

***SC 1000 – Should be added Week 1 for a complete purge to be effective, call for details**

Week 2 -

- 1) Retest phosphates to see if the enzyme exposed any unseen phosphates. Remember we are trying to keep the pool on a 200 calorie diet or less
- 2) Add 4-5 ounces of CV 700/CV 600 per 10,000 gallons, more will need to be added according to the level of organics in the pool
- 3) Add PR 10000 at no more than 8 ounces per 10,000 gallons to deal with any phosphates over 200ppb, clean filter as needed (watch pressure)
- 4) Pay attention to your chlorine readings and adjust how much liquid or tabs you are using. As you treat with Orenda over the next 3 weeks you will start to see your chlorine consumption start to drop.

Week 3 & 4 -

- 1) Retest phosphates and re-add no more than 8 ounces of PR 10000, and continue this process in week 4, until the phosphates are 200ppb or below. Clean filter as needed (watch pressure)
- 2) Add 4-5 ounces of CV 700/CV 600, adjust for organic loading

Month 2 -

- 1) Retest combined chlorine
- 2) CV 700/CV 600 can be adjusted down to 3 - 4 ounces per week, again depending on organic waste in pool. If your chlorine demand starts to go up, this is your signal that there is not enough CV 700/CV 600 (Enzymes) being added to pool to keep up with the organic waste in the pool

- 3) To help you maintain the 200ppb phosphates in the pool do the following -
- Test your source water for phosphates, if it is under 500ppb add 1 ounces of PR 10000, per 10,000 gallons to your pools 1x per month if it is above 500ppb, add 2 ounces per 10,000 to your pools 1x per month.
- 4) **SC 1000** - Maintenance dosing of 6 ounces per 10,000 gallons, 2x monthly should be continued for optimum performance after purge.
